

# **12v solar container lithium battery pack use 3 or 4 strings**

## Overview

---

Can a lithium ion battery pack have multiple strings?

Whenever possible, using a single string of lithium cells is usually the preferred configuration for a lithium ion battery pack as it is the lowest cost and simplest. However, sometimes it may be necessary to use multiple strings of cells. Here are a few reasons that parallel strings may be necessary:.

What is a 12V lithium ion battery pack?

A 12V lithium ion battery pack is a battery pack made up of three or four lithium batteries connected in series and several lithium batteries connected in parallel. This configuration allows the capacity of a 12V lithium battery to be customized.

What if there are only two batteries in a parallel string?

If there are only two batteries in the parallel string, we would then take a cable from the POS. (+) terminal of Battery 1 to the charger. We would use the POS. (+) terminal of Battery 2 for connection to the loads.

What if there are only two batteries in a series string?

If there are only two batteries in the series string (Figure 1), we would then take a cable from the open POS. (+) terminal of the first battery and a cable from the open NEG. (-) of the second (last) battery in the string to the load and charger/power source.
