

# **2MWh Off-Grid Solar Container Used in Ethiopian Tunnel**

## Overview

---

Is grid-connected solar power generation possible in Ethiopia?

Through study explored the potential of grid-connected solar PV power generation in Ethiopia. The study found that the average value of PV power plant capacity factor of the different locations considered is 19.8%, and the mean value for the electricity exported to the grid is 8674 MWh/year.

How does the Ethiopian Electric Utility (EEU) manage mini-grid sites?

Through government initiatives, the Ethiopian Electric Utility (EEU) selects mini-grid sites and places bids for private companies to contest. This bid can be an “MST” (minimum subsidy tender), through which the company is responsible for handling the whole process under government supervision.

How much electricity does Ethiopia have?

The existing total electricity generation capacity installed in Ethiopia is about 42,444.67 MW of which hydropower takes the lion’s share. However, there are significant disparities in access to electricity in urban and rural areas , .

Will solar PV technology reduce poverty in Sub-Saharan Africa?

The expectation that solar PV technology will reduce poverty has been one of the main forces behind efforts to spread solar PV in Sub-Saharan Africa in terms of problem priority and poverty alleviation. In the end, the government offers incentives through the energy strategic plan and highly prioritizes solar photovoltaics.
