

# **Africa s 8 3 billion energy storage power station**

## Overview

---

How much energy does South Africa have?

r systems (0-30 kWp) totalled 621 MW of capacity. In addition, commercial and industrial SSEG (30 kWp-1 MWp) stood at 1248 MW.<sup>25</sup> Yet, access to renewable energy and storage technologies in South Africa (and globally) remains the prospect of a minority. The vast majority of South African households do.

Will energy demand outpace supply in Africa?

The Combined scenario demonstrates that while energy production can significantly increase—particularly through renewables like solar, wind, and hydro—demand will still outpace supply, reinforcing Africa's dependence on energy imports.

How much energy does Africa produce?

Energy from hydro contributed less than 3%. Africa's energy production landscape is heavily fossil-fuel dependent (North and Southern Africa in particular) and is primarily composed of oil at 43.5%, gas at 32% and coal at 19%, much of which is exported.

What percentage of Africa's energy comes from renewables?

In 2023, only 3.3% of Africa's total energy production came from renewables, compared to 12.8% in South America and 5.9% in South Asia. The Africa Energy Chamber in its 2025 Outlook report notes that, currently, nearly 80% of Africa's solar and wind-based capacity is installed in North Africa, South Africa, Kenya, Ethiopia, Angola and Senegal.
