

# Aluminum solar container battery

## Overview

---

Can a solarfold battery be used at night?

In order to be able to use the generated energy even during the night, it is recommended to expand the solarfold container with a storage container. The battery storage system, including power electronics and connection unit, is stored in a container of between 10 and 20 feet in size.

How big is a battery storage system?

The battery storage system, including power electronics and connection unit, is stored in a container of between 10 and 20 feet in size. The storage system is based on proven lithium-ion technology (LiFePO) and sophisticated electronics.

How many homes can a solarfold Container Supply?

The on-grid version of the solarfold container is connected directly to the public power grid and can supply up to 40 single-family homes with the energy produced (energy requirement of 3,500 kW/year/single-family house). The solarfold on-grid container can also be expanded with various storage solutions.

What is a solarfold photovoltaic container?

The Solarfold photovoltaic container can be used anywhere and is characterized by its flexible and lightweight substructure. The semi-automatic electric drive brings the mobile photovoltaic system over a length of almost 130 meters quickly and without effort into operation in a very short time.
