Overview

What is a battery management system (BMS)?

A: A BMS monitors and balances the cells within a battery pack, preventing overcharging, over-discharging, and overheating, which can lead to cell damage or safety hazards. Q2: Can I use different types of battery cells in one pack?

.

Why should you choose a BMS-Matrix® battery pack?

The choice of BMS determines the quality and lifespan of the final battery pack. Our BMS-Matrix® technology is a totally modular BMS solution, allowing you to build a very large capacity or power battery from unit “energy bricks”.

What is a lithium battery pack and its casing?

What’s a Lithium Battery Pack and Its Casing?

A typical Li-ion battery pack consists of:

- The Enclosure: Usually split into an upper cover and a lower case (or tray).
- Li-ion Cells: The core energy storage units.
- High-Voltage (HV) Components: Connectors, busbars, etc., for power transfer.

How do you connect a BMS to a battery pack?

Connecting the BMS:

- B- Terminal: Connect to the main negative (-) terminal of the battery pack.
- B+ Terminal: Often already connected internally; check your BMS specifications.
- B1 (or B0): Connect to the most negative point (first cell's negative terminal).
- B2, B3, . : Connect sequentially to the positive terminals of each cell in series.
