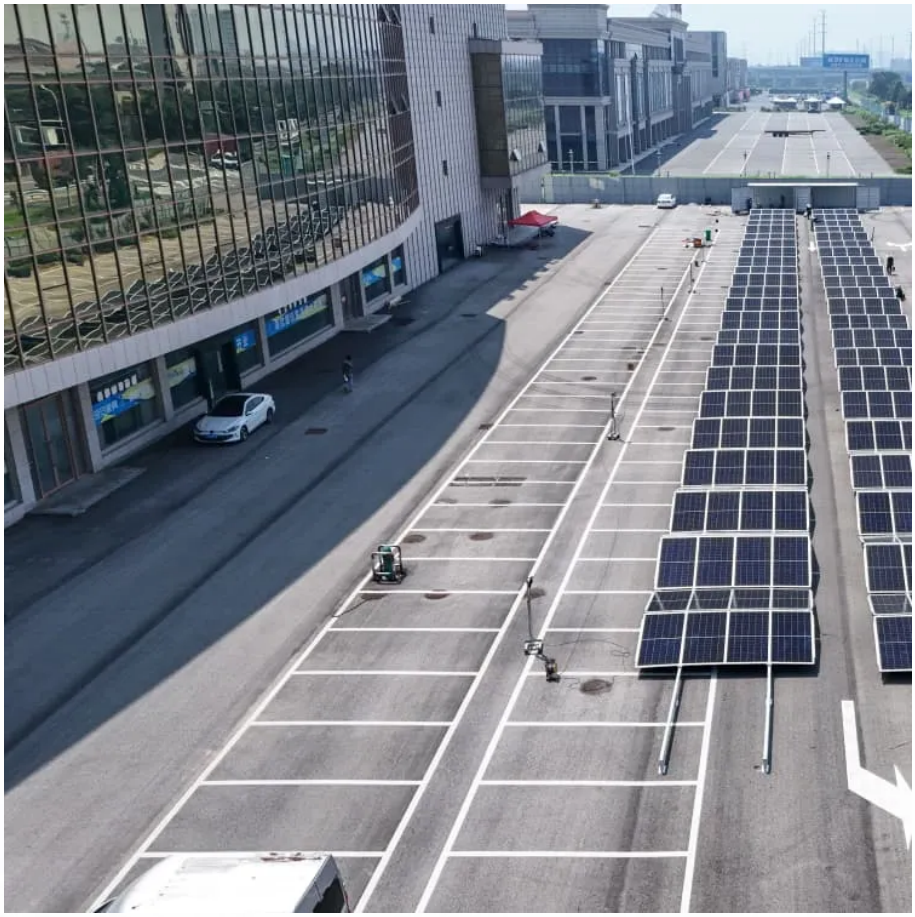
Battery module pack air cooling



Overview

Which structure has the best air-cooling effect in lithium-ion battery packs?

It is found that the square arrangement is the structure with the best air-cooling effect, and the cooling effect is best when the cold air inlet is at the top of the battery pack. We hope that this work can provide theoretical guidance for thermal management of lithium-ion battery packs. Export citation and abstract BibTeX RIS.

What is air-cooling battery thermal management system (BTMS)?

The air-cooling type of battery thermal management system (BTMS) is becoming popular in the EVs and HEVs industry due to its simplicity, high reliability, and safety features. This technique is especially useful in situations when cost savings are required, and the environment is uncertain.

Does air cooling reduce temperature in battery thermal management systems (BTMS)?

Air cooling techniques using MVGs inside the input duct channel have shown significant thermal performance in terms of temperature reduction in battery thermal management systems (BTMS). Furthermore, almost all the modified BP designs achieved significant temperature drops of 7 °C for individual cells within the BP at a 2.5C rate.

Does battery arrangement affect the thermal performance of a battery pack?

Here, a multiscale method combining a pseudo-two-dimensional model of individual battery and three-dimensional computational fluid dynamics is employed to describe heat generation and transfer in a battery pack. The effect of battery arrangement on the thermal performance of battery packs is investigated.
