

Can the electricity generated by rooftop solar panels be used for personal use

Overview

What is a rooftop solar photovoltaic system?

A rooftop solar photovoltaic (PV) system uses solar panels mounted on the roof of a building to convert sunlight into electricity. Rooftop solar systems rely on the photovoltaic effect, where cells generate electricity in response to sunlight.

Can solar panels be installed on a roof?

By placing panels on a rooftop, solar panels are optimally exposed to sunlight and produce enough electricity to power homes and buildings. First, a group of solar panels is installed on a roof, typically at an angle to absorb maximum sunlight.

How do rooftop solar panels work?

Rooftop solar systems work by harnessing the photovoltaic effect. This phenomenon occurs when sunlight hits the multiple cells within solar panels, generating an electric current. By placing panels on a rooftop, solar panels are optimally exposed to sunlight and produce enough electricity to power homes and buildings.

Are rooftop solar systems a good investment?

Rooftop solar systems entitle owners to many financial benefits, like saving money on electricity bills, increasing the value of the property, and receiving tax credits. Rooftop solar systems enable property owners to be partially or fully 'energy independent,' switch to renewable energy, and reduce carbon emissions.
