

Cost of Fast Charging Photovoltaic Containers for Wastewater Treatment Plants

Overview

Can photovoltaic conversion of solar energy be used in wastewater treatment?

The application of photovoltaic conversion of solar energy in wastewater treatment is described [1] and the research progress of photovoltaic conversion in electrooxidation system [2], reverse osmosis process [3], electrocoagulation process [4], aeration equipment [5], electroflocculation technology and fenton technology is reviewed.

Can solar PV be used in wastewater treatment plants?

Strazzabosco et al. assessed the status of solar PV in WWTPs of various sizes in California, USA, and determined the potential of solar PV in the wastewater industry . Colacicco et al. proposed a solar PV design method for WWTPs to optimize the energy consumption of oxidation tanks in WWTPs .

How much does a photovoltaic system cost?

The study revealed that the costs of the photovoltaic systems oscillate between USD 32,486.86 and USD 40,716.86, without using a storage system with batteries, since the price of these makes the investment recovery unfeasible. Instead of using batteries to store energy, a water storage system is used.

What is the PV potential of a wastewater treatment plant (WWTP)?

The PV potential of a WWTP is correlated with its planned wastewater treatment capacity. The number of wastewater treatment plants (WWTPs) in China is fast growing as the country's urbanization accelerates. WWTPs, part of the high-energy-consumption industry, must use a lot of energy in wastewater treatment.
