

EK60V Pure Sine Wave Inverter

Overview

What is a pure sine wave inverter?

A pure sine wave inverter is a device that converts DC power from a battery into AC power, allowing you to charge almost any household appliance or electronic device off-grid.

Do you need a sine wave inverter for solar panels?

You need a pure sine wave inverter if you plan to install solar panels on your roof or RV. Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level.

How does a sine inverter work?

A sine inverter takes the DC output of your solar array, converts it to AC, and does so in a way which replicates as closely as possible the pure sine wave of grid power alternating current. Moreover, pure sine wave inverters amplify the converted current to differing strengths of wattage and voltage.

How much does a sine wave inverter cost?

\$100-\$500 range: This is what you're likely to pay for most pure sine wave inverters on the market. These usually generate between 1,000 and 2,000 watts, so you can use one to power appliances in your off-grid cabin, RV, or boat. **\$500 and above:** This kind of money will get you a heavy-duty inverter with a power capacity from 3,000 to 12,000 watts.
