

Egypt Solar Power Generation System

Overview

Does Egypt have a solar plan?

In 2012, the Egyptian government approved the Egyptian Solar Plan, which includes adding 3.75 GW of solar energy by 2027: -3 GW concentrating solar thermal power (CSP) and 750 MW photovoltaics (PV). The Ministry of Electricity and Renewable Energy has signed nine MOUs worth \$600 million for solar and wind projects in Egypt.

Is Egypt investing in solar power?

In addition to wind energy, Egypt is also investing heavily in solar power. By 2026, the country plans to install 5.6 GW of new solar energy capacity. This will significantly increase the share of solar power in the national energy mix.

Where can solar power be developed in Egypt?

Utility-scale PV development has, thus far, clustered around Aswan in the south of the country, where solar resources are strongest and there is plenty of land for development. The biggest chunk of Egyptian solar capacity is provided by the Benban project, which lies 50 km from Aswan and is one of the world's biggest PV sites.

Will Egypt generate 42% of its electricity by 2030?

By 2030, Egypt aims to generate 42% of its electricity from renewable sources, a goal that will require ongoing investment and innovation in the sector. Egypt's ambitious plan to add 12 GW of renewable energy by 2026 marks a significant step forward in the country's energy transition.
