

Explosion-proof fan for container energy storage cabinet

Overview

What is a bs&b explosion vent?

Explosion Venting Protection for Battery Energy Storage Systems BS&B manufactures Ven -Saf™ explosion vents for Battery Energy / deflagration event caused by thermal reactions from release and container to safely move the explosion upward and away from the container. BS&B vents are certified to open at designated burstig.

How to prevent an explosion?

Technical measures can be taken to prevent or at least reduce the risk of an explosion. One element of this primary explosion protection is technical ventilation of the potentially explosive atmospheres. This reduces the concentration of the hazardous substance in the mixture and thereby lowers it to a safe level.

What are the applications of ventilation systems in potentially explosive atmospheres?

Typical applications for ventilation systems in potentially explosive atmospheres are: MAICO supplies the following fans in various nominal sizes and performance classes for potentially explosive atmospheres containing gas and dust. They are designed for use in zones 1 and 2 as well as 21 and 22 (hazardous areas):.

Why do we use bs&b vent-SAF vents?

ion of combustible vapors, possibly from overheating batteries. By using BS&B Vent-Saf vents, the deflagration and vapors are released through the vents, away from the BESS container, and into the atmosphere. The BES container is protected from the damaging effects of overpressure. pressures and manufactured using the
