

Fan-shaped roof solar panels

Overview

What is a solar-powered roof ventilation fan?

A solar-powered roof ventilation fan is an eco-friendly system that uses solar energy to drive fans installed on the roof. It helps remove excess heat, moisture, and stale air from attics, industrial sheds, or large buildings.

What is a solar attic fan?

A solar attic fan is a roof-mounted ventilation fan powered entirely by the sun. It actively pulls hot air out of your attic, reducing heat buildup and moisture using free solar energy (no wiring or electricity required). Key benefits: Solar attic fans can lower attic temperatures by 20–50°F, easing the load on your A/C.

What are the different types of solar attic fans?

Types of solar attic fans: Most residential solar attic fans are roof-mounted units – they resemble a low-profile dome or pyramid on your roof with a solar panel on top. There are also gable-mounted solar fans, which can attach behind an existing gable vent (with a separate solar panel that you mount on the roof nearby and wire to the fan).

Why do I need a solar fan for my roof?

Ice dams form when warm attic air melts snow on the roof, which then refreezes at the eaves and causes water backup – potentially damaging your roof and causing leaks. A solar fan helps keep the attic cold and dry in winter, so snow stays cold and in place instead of melting unevenly.
