

Fireproof double glass components

Overview

What is double layer fireproof glass?

Double layer fireproof glass stands out as a vital component in creating secure and resilient spaces for people to live, work, and be safety. As tested structures, the fire resitant windows and doors offer fire resistance for 30-180 minutes of integrity and insulation.

What is a fire resistant glass?

Class EI: Fire-resistant glass in this category offers highest level of protection from fire, smoke and radiant heat for a defined period of time (from 30 up to 180 minutes). Class EW: Glass in this category offers an integrity performance (protection from fire and smoke) whilst reducing transfer of dangerous radiant heat.

What are fire-resistant glass walls & integrate fire- resistant doors?

Fire-resistant glass walls and integrate fire-resistant doors can be used wherever building regulations prescribe the use of compartmentation components to contain fire and protect the building. The Promat glazing and door systems combine fully tested fire protection with maximum light and visibility.
