

# **German air energy storage project construction**

## Overview

---

Will Augwind build a 'airbattery' facility in Germany?

Israeli firm Augwind Energy has announced plans to build its first commercial-scale “AirBattery” project in Germany. The facility will be an industrial-scale operational installation of Augwind’s AirBattery Hydraulic Compressed Air Energy Storage (CAES) technology, designed specifically for grid-scale storage for up to months at a time.

What is airbattery hydraulic compressed air energy storage (CAES)?

It will be an industrial-operational-scale installation of the first of its kind AirBattery Hydraulic Compressed Air Energy Storage (CAES) designed by Augwind that can achieve a grid-scale storage capacity of several months, a paradigm-changing power infrastructure solution globally targeting the 2050 energy transition.

Will Germany be the first country to test a new energy storage system?

BERLIN - Germany will become the first country to test a revolutionary energy storage system that uses underground salt caves as massive air batteries, with construction planned between 2027 and 2028.

How long can batteries store energy in Germany?

Regular batteries can only store power for a few hours or days, but Germany needs a way to store energy for weeks or even months to keep the lights on during long periods of bad weather. This storage gap represents one of the biggest obstacles to Germany’s renewable energy goals. Figure 1.
