

Greece Energy Storage Power Supply Procurement Project

Overview

Greece has launched its third and final tender under a 1-GW program to support standalone battery energy storage systems (BESS), aiming to allocate 200 MW of capacity with available subsidies of EUR 200,000 (USD 217,920) per MWh. Does Greece have a battery storage subsidy program?

Greece's latest auction has awarded subsidies to 188.9 MW of standalone, front-of-the-meter, utility-scale battery energy storage. The auction was the third and final edition of a battery storage subsidy program launched in 2023, with the country now turning its focus towards a new 4.7 GW unsubsidized BESS scheme.

What is Greece's third energy storage auction?

Greece's third energy storage auction has been completed with nine projects selected. It was the final auction where the state provides subsidies to build battery energy storage systems (BESS). A total of almost 800 MW in capability has been awarded through all three storage auctions.

What are Greece's energy storage projects?

The projects are: Project Dokos in Rodopi, with a license of 8.875 MW for two hours, offering an initial installed usable capacity of 25.065 MWh. Greece has cancelled its third large-scale energy storage auction, after a lack of understanding over its rules on power capacity limits.

Why did Greece cancel a large-scale energy storage auction?

The energy regulator in Greece has cancelled the country's third large-scale energy storage procurement auction due to confusion over limits on how much power capacity could be bid in per participant, with a view to relaunching the scheme. The Regulatory Authority for Energy, Waste, and Water (RAEY) announced the decision last week (13 December).
