

# Grid-connected solar panels and household solar panels

## Overview

---

What is a grid connected solar system?

**Components and Prices Explained** A solar system connected to the utility grid through a bi-directional net meter is known as a grid-connected PV system. It is known by various names, including a grid-connected energy system, a grid-tied solar system, and an on-grid solar system.

What is a grid tied solar panel system?

When grid-tied, your solar panel system is connected to the grid via a bi-directional electricity meter. It measures the excess power you send to the grid when your solar panels produce more than you need, and the amount of energy you pull from the grid when your solar panel system doesn't generate enough.

What is an on-grid solar panel system?

An on-grid solar panel system, also known as a grid-tied solar system, is a solar power setup that connects directly to the local electricity grid. This configuration allows homeowners to utilize solar energy for daily electricity needs while remaining connected to the traditional power supply.

What is a grid-tied solar system?

On a grid-tied system, homeowners with rooftop solar panels generate the electricity they need, feed the surplus to the grid, and only turn to the grid when their systems aren't generating enough to meet their needs.
