

Home solar system installation

Overview

Should you install solar panels on your home?

Installing solar for home has the potential to lower your electricity expenses by enabling the generation of your very own energy directly from the sun. Because you're practically producing your own energy, residential solar panels can reduce the amount of power you buy from energy providers.

How do I install a solar energy system?

To transport and install, disconnect the power connector from the Base Station or Repeater. To clean, use a wet cloth and soap. Do not use abrasives or other chemical cleaners. The Solar Energy System needs to be installed outside with the Base Station (Repeater) nearby, in a place with full sunlight.

How do I prepare for a solar panel installation?

Installing solar panels helps homeowners save money and invest in cleaner energy. To prepare for an installation, determine your energy needs and home compatibility with a solar panel system. The installation requires complicated electrical work and paperwork that any reliable solar installer can handle.
