

# How many solar container communication stations in Panama have uninterrupted power supply

## Overview

---

What are the main sources of electricity in Panama?

The largest source in the electricity mix is hydropower, followed by thermal generation (oil products and coal). Wind and solar power came on line in 2013, and by 2016 Panama had 270 MW of installed wind power capacity and 90 MW of installed solar power capacity (SNE, 2015).

Does Panama have a transmission grid?

solar PV. The trust in Panama's electricity market is reflected in the growing capacity of solar and wind renewable generation, along with the implementation of distribute solar PV. However, in this edition of the World Energy Issues Monitor, the transmission grid emerges as the primary uncertainty and a prior.

Does Panama have solar power?

Since 2014, investments in solar and wind energy have grown markedly. Today, more than two-thirds of Panama's electricity generation comes from clean sources, primarily through the contribution of hydropower. The country also has the largest wind farm in the region, and solar power generation – although still modest – has begun to take off rapidly.

What are the challenges facing Panama's energy sector?

Challenge: Planning will remain an important cross-cutting area for Panama's energy sector, as planners must cope with rising variability and uncertainty from the envisaged high penetration of solar and wind generation through to 2050.
