

Indonesia Wind and Solar Energy Storage Project

Overview

Will Indonesia deploy 100 GW of solar?

The Indonesian government has revealed a new initiative aiming to deploy 100 GW of solar. The distributed solar for energy self-sufficiency program encompasses 80 GW of solar that will be deployed as 1 MW solar arrays with 4 MWh of accompanying battery energy storage systems (BESS).

Could solar and wind be the backbone of Indonesia's energy transition?

However, advancements in energy storage technology, such as battery energy storage systems and grid-forming inverters, could enable solar and wind, together boasting a technical potential of 3.4 TW, to serve as the backbone of Indonesia's energy transition.

Can Indonesia harness its renewable resources?

Conducted by the Institute for Essential Services Reform (IESR), this analysis highlights Indonesia's capability to harness its abundant renewable resources, including ground-mounted solar power and onshore wind energy.

What is Indonesia's potential for solar energy?

Indonesia's technical potential for solar ranges from 3,300 GW to 20,000 GW, according to IESR estimates, while the country's long-term energy policy targets up to 108.7 GW of solar by 2060. If implemented effectively, the program could redefine Indonesia's energy landscape and serve as a global benchmark for large-scale distributed renewables.
