

# Internal cell connection of solar panel

## Overview

---

How solar cells are connected to a solar PV panel?

In this post we'll dive into the details of different kind of connection of Solar Cells to form a Solar PV Panel as discussed in the last post. So to begin with, Solar Cells are either connected in series or in parallel or combination of series-parallel to obtain the desired rating of voltage, current and power.

What is a solar panel connection?

Solar panel connection is a key part of any photovoltaic system, determining how solar panels deliver power to the rest of the system. Installers typically choose between series or parallel solar panel wiring, depending on the desired system voltage, current output, and inverter compatibility.

How are solar panels wired together?

Several panels are first wired together in series to form strings of panels (for instance, three strings of solar panels featuring two panels connected in series would make up a total of six solar panels). To form a series-parallel connection, these strings of panels are then wired in parallel, as shown below:.

What is solar panel wiring in series?

Solar panel wiring in series is one of the most common solar panel connection methods, especially when higher system voltage is needed. In a series connection, each solar panel's positive terminal connects to the next panel's negative terminal, similar to how older strings of Christmas lights were wired.
