Overview

What are monocrystalline solar panels?

Monocrystalline solar panels offer superior efficiency and longevity compared to other types of solar panels, making them a prime choice for those seeking to invest in renewable energy. These panels utilize a single silicon crystal structure, enhancing their ability to convert sunlight into energy effectively and with fewer panels.

Why are monocrystalline solar panels better than polycrystalline panels?

Due to their high purity silicon structure, monocrystalline panels boast an efficiency rate of around 20% or higher, compared to polycrystalline panels, which typically range between 15-17%. This efficiency means fewer panels are required to produce the same amount of energy, making them ideal for space-constrained installations.

How much does a monocrystalline solar & battery system cost?

A 4.5kWp monocrystalline solar & battery system usually costs around £11,307, including the price of installation. This should get you 10 solar panels, each with a 450-watt peak power rating, as well as a 5kWh battery.

How do monocrystalline solar panels work?

Monocrystalline solar panels are made from a single crystal of silicon, which is a semiconductor material that can convert sunlight into electrical energy. When sunlight hits the surface of the panel, it excites the electrons in the silicon atoms, causing them to move and create an electrical current.
