

Island solar Panels

Overview

What is solar islanding?

Solar islanding is when a home solar power system continues to generate electricity even though the grid is down. This might sound like a good thing, as your home still has power from your solar panels while everyone else has no power. However, things become dangerous when your solar panel system produces electricity, and it goes into the grid.

Can your home be a solar energy island?

However, your home can be a solar energy island with renewable energy available during a power outage or blackout. Integrating a solar inverter with island mode and battery storage will give you this capability while maintaining a connection to the grid.

Who is island solar power?

ISLAND SOLAR POWER Swimsol provides affordable and durable marine floating & rooftop solar PV systems for the tropics, where land space is limited. We make solar energy a hassle-free experience by handling all the tech & maintenance. We work with ultra-luxury resorts and small businesses alike - always aiming to provide great service.

How does an islanding solar inverter work?

Your islanding solar inverter works independently from the power grid. If there's a storm or other event that knocks out the main power grid, your solar power system will continue running and providing power to your home. Many people mistake going solar with going off-grid, but that's typically not the case.
