## Overview

---

What is a liquid flow battery?

A liquid flow battery is a type of energy storage system that rely on fluids, called nanoelectrofuels (NEF), to generate electricity. They have been researched for many years and typically involve two chemical liquids that flow over the opposite sides of an ion-exchange membrane to create a flow of electric current. Unlike Li-Ion batteries, they do not rely on solid electrodes.

Are flow batteries a viable energy storage device?

Flow batteries (FBs) are one of the most promising stationary energy-storage devices for storing renewable energy but their commercial progress is limited by their high cost and low energy density. A neutral zinc-iron FB with very low cost and high energy density is presented.

Are flow batteries the future of energy storage in Australia?

Australia is one of the fastest growing energy storage markets in the world with the most mature storage technologies being pumped hydro and lithium-ion batteries [i]. But other technologies have been developing in the background - such as flow batteries - which provide opportunities in larger scale applications.

How much energy will a flow battery store?

The battery will store 800 megawatt-hours of energy, enough to power thousands of homes. The market for flow batteries - led by vanadium cells and zinc-bromine, another variety - could grow to nearly \$1 billion annually over the next five years, according to the market research firm MarketsandMarkets.
