

Luxembourg power generation wind power and energy storage

Overview

How will Luxembourg contribute to energy independence?

Luxembourg is already participating in cross-border renewable energy projects and is committed to expanding its role in collaborative projects such as those related to offshore wind energy in the North Sea and hydrogen corridors, to contribute to the EU's goal of energy independence.

Which energy sources are used in electricity production in Luxembourg?

Electricity generation fed into the grid The visualisation shows the share of the various energy sources in the production of electricity fed into the grid in Luxembourg. Imports and exports, as well as self-consumed production, are not taken into account. Electricity generation from wind turbines.

Should Luxembourg invest in solar and nuclear energy?

Luxembourg, echoing these models, could greatly benefit from increasing solar and nuclear energy production. By investing in infrastructure that supports solar and nuclear energy, Luxembourg could enhance its electricity independence, while concurrently supporting global climate objectives through reduced carbon emissions.

Does Luxembourg have low-carbon electricity?

Reflecting on Luxembourg's history of low-carbon electricity, there have been various developments, especially in hydropower and wind energy. Notably, in the 1990s, hydropower saw fluctuations in production, with modest rises and falls annually.
