

Manama lithium energy storage power supply current price

Overview

How did China's spodumene crisis affect Lithium prices?

The lithium mine production increased from about 35,700 metric tons in 2023 to around 41,000 metric tons in 2024 in the Chinese region. Along with this, increased upstream spodumene output, coupled with elevated inventory levels of lithium chemicals, put downward pressure on prices in all major Asian markets.

Why are lithium markets under pressure in the second quarter 2025?

During the second quarter of 2025, lithium markets continued to be under pressure as a result of the ongoing oversupply situation. The lithium mine production increased from about 35,700 metric tons in 2023 to around 41,000 metric tons in 2024 in the Chinese region.

Why is the lithium price graph under pressure?

Analyst Insight According to Procurement Resource, the lithium price graph is expected to remain under pressure due to ongoing oversupply in major markets, with inventory levels continuing to weigh down the market. Please [Login](#) or [Subscribe](#) to explore our dashboard.

Why did Lithium prices remain under pressure in the first quarter?

During the first quarter of 2025, lithium prices remained under pressure due to persistent oversupply and weak demand. High inventory levels, particularly in China, continued to weigh on the market. Despite some production cuts, the excess availability of low- and mid-grade concentrate stocks further exacerbated the situation.
