

Niger Solar Power System

Overview

Where is solar energy used in Niger?

Solar energy is well-suited for use in Niamey and Zinder, located at lower latitudes, as they show less variability in solar radiation throughout the year. Niger has a long history of solar energy use, which began in the mid-1960s with the establishment of the Centre National d'Énergie Solaire (National Solar Energy Centre; CNES).

Are there any off-grid solar energy systems in Niger?

Yes, there is considerable experience of off-grid solar energy systems in Niger. These include off-grid PV electrification, water pumping, and solar water heating systems. The main decentralised renewable energy system promoted in Niger for rural electricity is solar PV.

Why is Niger a pioneer in solar energy?

Niger was one of the first countries to consider renewable energy technologies as a solution to its energy needs. This commitment dates back to the 1960s, when Niger set up the Solar Energy Office (Office de l'Énergie Solaire - ONERSOL), later renamed the National Solar Energy Centre (Centre National d'Énergie Solaire - CNES).

Is solar energy installation uncommon in Nigeria?

Solar energy installation is not yet common in Nigeria. The major components or equipments for solar energy generation are solar panels and Inverter batteries. These two items are the most expensive equipment for solar energy installation. The capacity of solar energy in Nigeria is dependent on these two items mentioned.
