How many wind farms & photovoltaic farms can be integrated into a distribution system?

This work has assumed that two wind farms, two photovoltaic farms and one battery energy storage system are integrated into the distribution systems by applying inverters with a fixed 0.9 lagging power factor 31. Minimum and maximum numbers of the WFs and PVFs are 2 and 15 wind turbines, and 2,000 and 10,000 photovoltaic modules, respectively.

What is considered a cost of a power plant?

The considered costs include (1) investment, operation, and maintenance (O&M) costs of WFs, PVFs, and BESS; (2) imported energy cost for loads and power losses from the main power grid; and (3) generated emission cost from conventional power plants considering time-varying generation and consumption.
