

Power supply cabinet of Porto Novo base station

Overview

What is a base station & a PV powering Unit?

The base station uses radio signals to connect devices to network as a part of traditional cellular telephone network and solar powering unit is used to power it. The PV powering unit uses solar panels to generate electricity for base stations in areas with no access to grid or areas connected to unreliable grids.

Which power supply mode is used for micro base station?

For the micro base station, all-Pad power supply mode is used, featuring full high efficiency, full self-cooling and smooth upgrade for rapid deployment and site construction & operation costs reduction.

What is a solar-powered base station?

A solar-powered base station as shown in Fig. 5.14 consists of a PV powering unit, a base station and a cooling unit. The base station uses radio signals to connect devices to network as a part of traditional cellular telephone network and solar powering unit is used to power it.

How does a photovoltaic base station work?

Solar-powered base station. The photovoltaic array converts sunlight into 48 V DC to power communication equipment of the base station. The DC output of photovoltaic module is also converted to 110/220 V AC using an inverter for powering air conditioning of the base station.
