

Prado high power inverter

Overview

Is a 10.5 V IIRC a good setting for a Prado fridge?

After trial and error we set up ours to the 10.5v preset (iirc) as the prado voltage often drops to 11v during driving and thus the 11.5 and 12 v preset wasn't letting the fridge run to maintain its coolness. I think your setup should be fine, however, I've got a TX model, so there's far less electronics.

Can you connect a compressor to a Prado?

You can connect it in the back of your Prado, just don't expect it to cool. Check that the built in voltage cutoff is set to minimum. Our prado drops voltage when driving to 11v and thus not letting the compressor kick in. Mine is set to 10.5 i think so then it keeps the stuff cold.

Should I use an inverter or a 12 V plug?

Would it be better to rather use the inverter plug than the 12 v plug. If the car is running, little difference. If it is not, then you will be wasting power. An inverter carries a lower efficiency rating, so you lose around 15-20% by converting to AC. Canon 5DMkIV with L-goodies.

Do you use a 12 volt inverter?

Using the inverter involves a power conversion loss - remember the inverter itself uses power to run, apart from any other consideration. We use a 1 000 W inverter / 12 volt system with two 100 AH batteries. (Old ones). I only use inverter when I need 220V AC, otherwise always 12v.
