

# Promoting distributed solar energy storage

## Overview

---

What is distributed solar?

Distributed solar contrasts strikingly with utility-scale solar energy (USSE) enterprises, as the latter have relatively larger economies of scale, high capacity (typically  $>1$  MW), and are geographically centralized—sometimes at great distances from where the energy will be consumed and away from population centers.

Is distributed PV solar energy a promising energy and environmental policy opportunity?

With the residential sector consuming 25% of the total electricity, there is a significant opportunity for distributed PV solar energy in countries where more than 75% of the area receives an isolation greater than  $5 \text{ kWh} / \text{m}^2 / \text{day}$ . This fact makes distributed PV solar energy a promising energy and environmental policy opportunity.

Does a hybrid storage-wind virtual power plant participate in the electricity markets?

Alahyari, A., M. Ehsan, and M. Mousavizadeh. 2019. "A hybrid storage-wind virtual power plant (VPP) participation in the electricity markets: A self-scheduling optimization considering price, renewable generation, and electric vehicles uncertainties."

Why is DSG a broad and multidisciplinary research field?

DSG is a broad and multidisciplinary research field because it relates to various fields in engineering, social sciences, economics, public policy, and others. Developing a holistic understanding of the state of research related to DSG can be difficult.
