

# Ratio of solar container battery output value

## Overview

---

Can solar PV and battery energy storage be integrated?

Several papers have presented technical and economic models for integrating solar photo-voltaic (PV) and battery energy storage systems (PV-BESS). Integrating storage with solar PV can help counter the intermittency and variability of solar generation, as well as provide energy arbitrage for projects with time of day tariffs.

Why is BCR a good choice for Solar & Battery sizing?

The BCR considers both the cost, as well as the savings due to energy generation from the project, and is applicable even for cases where the tariff is variable with time. Hence, BCR is well suited for deriving the optimum value of solar and battery sizing.

How can solar and storage reduce energy import?

By installing solar and storage, the amount of energy imported from the grid is reduced. The annual energy imported from the grid can be calculated, for different solar and BESS capacities using the dispatch algorithm discussed in Dispatch algorithm (net metering) section.

Can solar PV and battery be placed together?

Also, in AC systems, the solar PV and batteries can be placed independently, depending on the availability of suitable locations. One downside of AC systems is that two separate inverters are required, a PV inverter and a battery inverter, which will lead to an increase in the initial cost.
