

Solar container lithium battery BMS architecture

Overview

What is a battery management system (BMS)?

Advanced BMS, such as EVESCO's, monitor cells, modules, strings, and the entire system in real time, using algorithms to balance and control the battery, manage thermal conditions, and prevent thermal runaway. A well-designed BMS is essential for battery safety and longevity. The below picture shows a three-tiered battery management system.

What functionalities can be found in a battery management system (BMU)?

Some other functionalities that can be in the BMU are interlock functionality or the real time clock and vector management system for the software. BMS Software Architecture: The battery management system architecture has different layers that abstract different parts of hardware.

What is a BMS used for?

BMSs are used in various applications, including Electric Vehicles (EVs), smartphones, renewable energy storage systems, and other devices powered by rechargeable batteries. The building unit of the battery system is called the battery cell. The battery cells are connected in series and in parallel to compose the battery module.

What is a battery energy storage system?

For this guide, we focus on lithium-based systems, which dominate over 90% of the market. In more detail, let's look at the critical components of a battery energy storage system (BESS). The battery is a crucial component within the BESS; it stores the energy ready to be dispatched when needed.
