

Solar panel battery label

Overview

What is a solar label?

Labels are printed on self adhesive vinyl and are designed to remain legible and in place throughout the design life of the system. Labels are available individually or in quantity on sheets of one type. Used in systems incorporating energy storage systems (including batteries and inverter/chargers) with grid connected solar photovoltaic systems.

Why are PV and battery labels required?

PV and battery labels are required to meet certain standards in order to be durable for the entire life of the system. The requirements listed in 2.1.2 ensure that the labels used meet the compliance requirements for the specific system type. NOTE - The following is an amalgamation of the requirements across the standards.

Should you label your solar power system?

Solar power systems are carefully assembled blends of tech, wires and numbers - understanding them through labelling can save you headaches down the line. Plus, keeping things safe is another biggie when it comes to labels.

How do you label a solar system?

Properly labeling the solar system requires accuracy and precision. The key elements include using standardized terminology, providing clear and concise information, and ensuring the labels are visually appealing. For more insight on solar system labels, consult experts in the field to guarantee accurate and informative labeling.
