

Solar panels and solar panels laid flat

Overview

Can solar panels be installed flat?

Yes, you can install solar panels flat, but they will experience a degree of energy loss without the slightest inclination towards the sunlight. Although it certainly is advantageous to have a roof that is inclined in the sun's direction, a flat surface will also do.

Can a flat PV system fit more solar panels?

US-based energy technology developer, Erthos, is a clear example of a company investing heavily in flat PV panels. They have obtained a patent for an 'Earth Mount Solar PV system' which the company says can fit more panels into a space than conventional utility-scale plants. So are these companies on to something interesting?

.

Are flat panels better than ground-mounted solar panels?

Installing flat panels rather than ground-mounted systems has significant advantages for solar project developers. Without the need for groundwork and foundations to be laid — nor the need for complex moving parts such as motors and gears in tracking systems — solar plants using flat panels can be installed at a lower cost than conventional panels.

Should you put solar panels on a flat roof?

Although it certainly is advantageous to have a roof that is inclined in the sun's direction, a flat surface will also do. With a flat roof, your solar panels will still get direct sunlight, which is the whole point of putting them on the roof.
