## Overview

Why should I connect my solar panel to an inverter?

Connecting your solar panel to an inverter is important in harnessing solar energy for daily use. An inverter transforms the direct current (DC) electricity produced by the PV solar panels into alternating current (AC) electricity (the standard form used by most home appliances).

Do I need a solar panel and an inverter?

As a first-time solar PV system owner, you might have no idea why you need a solar panel and an inverter. The truth is that, for your system to function as expected, these two components should be available. How you connect the two components determines the experience you will have with your system.

How do solar inverters work?

They connect a series of solar panels (a string) to a single inverter, which converts the combined DC output into AC electricity. 2. Microinverters: These are small inverters that connect directly to each solar panel, converting DC to AC electricity at the source.

How do I set up a solar inverter?

Existing inverters in grid-tied systems operate from a control panel. Set the amount of amps you need your inverter to pull from the solar panels. You can also switch of the electricity grid in a way the system runs on solar a ray only. Start the system and check if the control panel is sending any current to your inverter.
