

Spanish environmentally friendly solar glass

Overview

What is Photovoltaic Glass?

Photovoltaic Glass Photovoltaic (PV) glass, also known as solar glass, combines the functionality of traditional building materials with renewable energy generation capabilities. PV glass integrates solar cells into its structure, allowing it to capture sunlight and convert it into electricity.

What is solar glass used for?

Building-integrated photovoltaic glass from Onyx Solar can be used to create walkable floors and roofs, skylights, facades, windows and brise soleils. The solar glass panels are designed to replace conventional building materials in new buildings to increase sustainability, and they can also be used to retrofit existing buildings.

Which float glass is best for solar applications?

Arsenic- and antimony-free extra clear float glass for solar applications. SunMax Premium is exclusively produced in a float glass process. The industrial float glass process adheres to very strict production tolerances and guarantees the lowest possible defect density. Read more about some of our recent selected finished success stories.

Is glass a sustainable building material?

As one of the most versatile building materials, glass plays a significant role in achieving sustainability goals in modern construction. In this article, we will explore sustainable glass solutions and eco-friendly options that contribute to environmentally responsible building practices. 1. Energy-Efficient Glazing
