

The function of circuit breaker in UPS battery cabinet

Overview

The UPS is interfaced to the Battery Circuit Breaker (BCB) control board using input contacts to retrieve the status of the external switches/breakers and an output contact used to send the trip signal to remotely open the battery circuit breaker. How does a battery circuit breaker work?

The UPS is interfaced to the Battery Circuit Breaker (BCB) control board using input contacts to retrieve the status of the external switches/breakers and an output contact used to send the trip signal to remotely open the battery circuit breaker.

What is an uninterruptible power system (UPS)?

Uninterruptible power system (UPS) (1) An electrical system designed to provide instant, transient-free backup power during power failure or fault. Some UPSs also filter and/or regulate utility power (line conditioning). (2) A Device whose sole purpose is to save your equipment, your data and your job. User replaceable.

What is a DC rated battery circuit breaker (BCB)?

These can be equipped with a monitoring device connected to the UPS or BMS to warn if a fuse has tripped or is disconnecting the battery from the UPS. The DC rated Battery Circuit Breaker (BCB) provides still overcurrent protection, if correctly coordinated, even though it is not as fast as the fuses.

What is a Battery breaker setting?

The concerned “setting” is the magnetic or instantaneous level, that is usually given adjustable in % of the nominal current. Battery circuit breakers can be equipped with a monitoring device connected to the UPS or BMS to warn if the breaker tripped.
