

# Top Ten Tests for Large Battery Cabinets

## Overview

---

What types of battery testing equipment are available?

The Cadex Electronics C700 and C800 battery testing equipment series have various test modes to test and analyze the battery health such as constant current mode (CC), constant voltage mode (CV), constant power mode (CP), DCIR, cycle testing, capacity testing and load simulations.

What is a battery testing system?

Cadex Electronics battery testing system can be used to test lithium-ion battery, nickel based battery and lead acid battery. Users can obtain customized battery testing equipment based on their specific needs.

What types of battery tests does Keysight provide?

Keysight Technologies provides a variety of battery tests which enable users to perform a complete battery health analysis including constant current mode (CC), constant voltage mode (CV), constant power mode (CP), DCIR, cycle testing, impedance testing and thermal behavior evaluation.

What testing systems are available in our battery labs?

Our Battery Labs have shock and vibration testing systems with a maximum force vector of 120 kN, mounting surfaces of 1.20 x 1.20 m and a maximum load of up to 1,000 kg. Shaker tests are also possible under thermal and climatic superposition with simultaneous loading/unloading.
