What is a ups inverter & how does it work?

In this basic UPS system, the inverter is used as the device to convert the DC to AC since the power from battery use DC current but it has to be distributed in the form of AC. More information about UPS is available in What Is Uninterruptible Power Supply or UPS.

Can an inverter be used as a backup power supply?

Though the inverter can be also used as backup power supplies when combined with an energy storage system, it can not realize the seamless transition as a UPS does. While due to the more complicated circuit and considering the additional components and functions, a UPS is generally more expensive than an inverter.
