

# What does 6PCS uninterruptible power supply mean

## Overview

---

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is defined as a piece of electrical equipment which can be used as an immediate power source to the connected load when there is a failure in the main input power source. In a UPS, the energy is generally stored in flywheels, batteries, or super capacitors.

Why do you need an uninterruptible power supply?

In these sorts of scenarios, uninterruptible power supplies can offer you additional peace of mind and an extra level of safety for both your hardware and your data. What does a UPS do?

How do they protect equipment?

What different types of UPS are available in today's market?

A quick note on naming conventions.

What is an uninterrupted power supply battery?

Uninterrupted power supply batteries are an essential part of a UPS system. They are the stopgap measure designed to briefly supplement power when the main power source fails. UPS batteries are a key feature in the instantaneous response to power outages and are critical to the protection of sensitive electronics and devices.

What are the different types of ups power supply?

Typically, according to different working principles, UPS power supply covers standby (offline) UPS, line-interactive UPS, online (double-conversion) UPS. The standby UPS system offers only the most basic features, providing surge protection and battery backup. Thus, its power supply quality is not good enough and the cost is much lower.
