

What is the dual BMS battery management system

Overview

What is a battery management system (BMS)?

A battery management system (BMS) is an intelligent electronic control unit that monitors, manages, and protects battery packs, primarily evaluating lithium-ion battery systems. Serving as the intelligent interface between battery cells and the electrical system, the BMS ensures safe and efficient battery operation throughout its lifecycle.

What is a battery management system?

The battery management system includes a battery control unit and multiple cell supervision circuits. The electronic disconnect unit serves as an all-in-one solution that integrates a battery disconnect unit, a battery management system, and optionally the cell monitoring units. based on volume production possible due to global production network.

What is a battery management system & electrical battery disconnect unit?

The battery management system and electrical battery disconnect unit consist of several components designed to monitor, manage, control, and disconnect the battery cells of a battery-electric or plug-in hybrid vehicle. The battery management system includes a battery control unit and multiple cell supervision circuits.

What is BMS & how does it work?

As the "intelligent brain" of battery packs, BMS operates safely and reliably in complex application environments through real-time monitoring, intelligent protection, and precise management, which is directly related to driver safety and vehicle performance.
