

What is the solar system for home use

Overview

What is a home solar system?

A home solar system refers to a collection of solar panels, the photo-voltaic system needed to produce current. The number of solar panels present in a solar system can depend on the number of appliances that the home has and the duration of sunlight that the panels are exposed to on a given day.

Can solar panels power your home?

Charlotte homeowners are increasingly using solar panels to power their homes and heat their water. If you live in one of the area's many old homes, you might not think your electrical system would accommodate solar panels. However, new technology and savvy installers can help these homeowners access renewable, clean power.

How does a home solar system work?

A home solar system works by allowing customers to make a small initial down payment for a high-quality solar PV system and then prepay for the energy service. They can top up their systems in small, user-defined increments using a mobile phone. The technology platform consists of low-cost, prepaid meters supported by sophisticated cloud-based software embedded in the solar system.
