

What is the temperature requirement for energy storage containers

Overview

How much energy does a container storage temperature control system use?

The average daily energy consumption of the conventional air conditioning is 20.8 % in battery charging and discharging mode and 58.4 % in standby mode. The proposed container energy storage temperature control system has an average daily energy consumption of 30.1 % in battery charging and discharging mode and 39.8 % in standby mode. Fig. 10.

What is a container energy storage system?

Containerized energy storage systems play an important role in the transmission, distribution and utilization of energy such as thermal, wind and solar power [3, 4]. Lithium batteries are widely used in container energy storage systems because of their high energy density, long service life and large output power [5, 6].

How much power does a containerized energy storage system use?

In Shanghai, the ACCOP of conventional air conditioning is 3.7 and the average hourly power consumption in charge/discharge mode is 16.2 kW, while the ACCOP of the proposed containerized energy storage temperature control system is 4.1 and the average hourly power consumption in charge/discharge mode is 14.6 kW.

How to choose a compressor for a container energy storage battery?

In view of the temperature control requirements for charging/discharging of container energy storage batteries, the selection of the compressor is based on the rated operating condition of the system at 45 °C outdoor temperature and 18 °C water inlet temperature to achieve 60 kW cooling capacity.
