

# Wind power storage trading

## Overview

---

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

What drives energy storage project development?

Globally, energy storage project development is increasingly driven by the utility-scale segment, with mandates and targeted auctions driving gigawatt-hour projects in markets like China, Saudi Arabia, South Africa, Australia and Chile.

How will wind & solar payments work in 2025?

New policy introduced in February 2025 requires wind and solar payment mechanisms to move toward more market-based structures, where 100% of wind and solar generation is to be traded in the wholesale market with local governments left to define their own implementation details by the end of the year.
