Is solar energy storage a problem?

The problem of energy storage is especially actual in respect to renewable sources of energy, such as sun, wind, tides, which have seasonal or diurnal variations and which therefore are not available at any moment of time. This paper overviews the main principles of storage of solar energy for its subsequent long-term consumption.

How can energy storage be realized?

As has been shown, energy storage can be realized by using simple methods and well-known materials. demonstrate the amazing progress. For example, STH efficiency major breakthrough in this field. Electrochemical and redox of energy storage. Thus, artificial technologies of energy storage surpassed the natural photosynthesis.
